

USB-A & USB-C What's the difference?

The USB Type C connector is now being adopted by all the major manufacturers of mobile devices (phones, tablets etc) and has already been incorporated into some laptops. This is not only because of its small form factor and the fact that it is reversible, making it simpler and easier to use, but also because it enables significantly faster charging than was possible with the USB Type A connector, whilst at the

same time (for relevant devices) replacing all former AV/data connections, such as VGA, HDMI, USB-A, RJ45.

TUF-R^{A+C} from OE Electrics provides both the new USB-C port, for enhanced fast charging of compatible devices, plus a USB-A for charging legacy devices – suiting users with any USB powered device old or new.
